

Fiber optic attenuators can reduce the power level of an optical signal. They are often combined with an active system component to maintain a desired signal strength in fiber network.

Optimized for OM3 multimode fiber, this fixed attenuator provides a straightforward and efficient way to reduce optical signal strength for applications requiring specific power levels.

Key Features Applications Documents o Fiber Optic Attenuators, Fixed Attenuation with a Variety of Connector Types o 1260 to 1620nm Wavelength Range Singlemode, also Multimode Versions o ...

Typically, this function is embedded in an optical connector or adapter element to simplify optical network installation. We utilize attenuating fiber that reduces power while preserving performance ...

Thorlabs has a wide variety of single mode (SM), polarization-maintaining (PM), or multimode (MM) fixed and variable optical attenuators (VOAs). We offer SM and PM electronic VOAs that provide control of ...

Fiber optic attenuators are devices used to reduce or monitor the power level of a fiber optic signal. Basic types of fixed attenuation include single mode, dual window and multimode in D4/PC, FC, ...

An optical attenuator, or fiber optic attenuator, is a device used to reduce the power level of an optical signal, either in free space or in an optical fiber. The basic types of optical attenuators are fixed, step ...

In-Line Fixed Attenuators are mainly used for adjusting the Optical Power to a desired level. We manufacture our attenuators with various specifications such as different connector types or end face ...

Our attenuators are wavelength insensitive, which means they operate with minimal changes in attenuation when used in either the C-Band or the L-Band and exhibit low return loss.

These compact attenuators have a male connector at one end and a female connector at the other end, enabling them to be placed in the optical path without additional fiber pigtails and connectors.
