

Upsite Technologies" AisleLok server rack baffles and sliding doors allow you to maintain optimal hot & cold aisle separation and improve your data center airflow management.

Simple installation turns practically any rack, open or sealed, into a portable, self-contained server room. Works with standard 120V/20A power--no external components or building modification required.

Because of the front-to-back airflow of the systems, the ideal placement of the cabinets and racks have the systems installed front to front and back to back. This configuration is referred to as a hot ...

Delivers controlled airflow, prevents hot/cold air mixing, and reduces cooling energy costs across the data center. Built for data centers, colocation facilities, enterprise IT rooms, and environments ...

Like the horizontal solution, the containment is placed in one go and filled with racks after implementation. This solution comes in silver anodized color as standard, and the ground-to-roof ...

By isolating the cold aisle, containment reduces unintended mixing of cold supply air with hot exhaust air, maintaining uniform, predictable temperatures across all racks.

Austin Hughes designs UltraRack IT server racks, InfraRack Intelligent server racks, InfraAisle cold aisle containment, InfraSolution SmartCard access control & monitoring for global branded rack.

The goal of a hot or cold aisle configuration is to conserve energy and lower cooling costs by managing air flow. Designing the proper containment system requires lining server racks in rows (or aisles) with ...

In its simplest form, hot/cold aisle data center design involves lining up server racks in alternating rows, with cold air intakes facing one way and the hot air exhausts facing the other.

The goal of a hot or cold aisle configuration is to conserve energy ...

A modular kit of adjustable beams that connects aisle containment frame end kits and supports clear roof panels in an aisle containment system designed to optimize cool airflow between rows of rack ...
