

An aggregation switch is a network device that consolidates traffic from multiple access switches, wireless access points, or other edge devices and forwards it to core switches or routers. By ...

Introduction and overview This guide includes two sample configurations for Link Aggregation Control Protocol (LACP), or dynamic channel groups, as well as a sample configuration for a static channel ...

Ethernet Port Aggregation bonds multiple Ethernet ports into one logical link for more speed and redundancy using protocols like LACP.

This video shows you how to build a 10Gbps fiber optic network between buildings using PoE+ switches, SFP+ transceivers, and link aggregation for even higher speeds (up to 40Gbps!).

Core switches set up a CSS that functions as the core of the entire campus network to implement high network reliability and forwarding of a large amount of data. Aggregation switches set up stacks to ...

Medium Branch Switch Configuration The In this deployment the Aggregation switch will have dual purposes, providing power and layer 2 access to wired devices and access points, while ...

Before configuring broadband access aggregation, you will need to know the information that is presented in the "Understanding Broadband Access Aggregation" module.

This video shows you how to build a 10Gbps fiber optic network between buildings using PoE+ switches, SFP+ transceivers, and link aggregation ...

In this article, I'm going to describe how to set up Link Aggregation between two managed switches to provide connectivity, redundancy, and expanded bandwidth. I'm going to set up Link Aggregation ...

This blog post explains link aggregation as a way of bundling individual Ethernet links together so they act as a single logical link. Extreme Networks: Link Aggregation on the Switch: This ...

Link Aggregation Group (LAG) You configure a LAG by specifying the link number as a physical device and then associating a set of interfaces (ports) with the link. All the interfaces must have the same ...
