

Diagram showing the connection between soft and hard fiber tailpipes

Well Tailpipes or Tailpieces serve as Low Water Protection Devices. This article describes the use of a tailpipe or tail piece, or other low water cutoff controls to protect a well pump from damage in a low ...

The tailpipe, also known as the tubing below the packer, is a section of tubing that connects the production tubing (the main conduit for oil and gas) to the packer. The packer is a device placed ...

tools that makeup the BHA. This handbook explains the purpose of each tool, how to select and proper assembly procedures for maximum effecti. eness and minimum trouble. Today the BHA serves ...

"Temper" describes the strength and hardness of the tube. In the piping trades, drawn temper tube is often referred to as "hard" tube and annealed as "soft" tube. Tube in the hard temper condition is ...

When it is considered necessary to use the vehicle exhaust system, two options are available: one is to take the pipe outside the building through a panel in the cell wall, the other is to put the tail pipe into ...

Learn how to properly install and use soft-to-hard tube connectors for leak-free connections in laboratory, medical, and industrial applications. ...

Learn how to properly install and use soft-to-hard tube connectors for leak-free connections in laboratory, medical, and industrial applications. Complete guide with troubleshooting ...

Next to all individual casing data, these manufacturers running guides will provide you detailed information on the particular connection, how to handle the pipe, how to apply running ...

This fabrication manual is offered to assist you in the proper fabrication and installation procedures when assembling your NOV Fiber Glass Systems piping system.

SPMs are fitted in the well conduit where it is necessary to install a valve that will provide communication between the tubing and the annulus. The valves may be installed/retrieved by wireline or coiled ...

For all flexible pipe systems the field layout will give boundaries for the system configuration, e.g. spacing between mooring lines will limit the number of risers and flowlines in each mooring sector, ...
