

Fiber Bragg Grating Products Using our advanced FBG writing technologies with holographic phase mask and ebeam phase mask, we are able to write many different types of fiber Bragg grating such ...

We specialize in custom fabrication of fiber optical gratings (FBG) across wavelengths from 400 nm to 2000 nm, tailored to precise customer specifications.

Optics HIGH-POWER FIBER BRAGG GRATING Coherent's high-power fiber Bragg gratings (FBGs) are characterized by their high performance and stability, precise wavelength control and low insertion ...

Thanks to the highly localized fiber Bragg grating obtained by a femtosecond laser and point-by-point inscription method, a cladding mode spectral range of over 80 nm is achieved in ...

Fiber Bragg Grating technology FBG technology brings many advantages over the conventional sensing methods, such as immunity to EMI/RFI, high precision, durability, quasi-distribution, absolute ...

Fiber Bragg Sensor Gratings Product Description: A fiber Bragg grating (FBG) is a type of distributed Bragg reflector formed in a short segment of optical fiber. It reflects particular wavelengths of light ...

A fiber Bragg grating is a structure within the core of an optical fiber with a periodic variation of the refractive index. It acts as a wavelength-selective mirror, reflecting light in a narrow range of ...

Fiber Bragg Sensor Gratings Product Description: A fiber Bragg grating (FBG) is a ...

Apodized Fiber Bragg Gratings are designed to produce a single, sharp reflection peak without side lobes. Therefore, they can be ideally utilized in lasers and filters, where precise, single-peak ...

AtGrating is a professional company for optical fiber sensing. AtGrating offers industrial solutions by providing customized sensors and sensing instruments that add value, reduce uncertainty, and ...

A fiber Bragg grating (FBG) is a type of distributed Bragg reflector constructed in a short segment of optical fiber that reflects particular wavelengths of light and transmits all others.

OverviewHistoryTheoryTypes of gratingsGrating structureManufactureApplicationsSee alsoA fiber Bragg grating (FBG) is a type of distributed Bragg reflector constructed in a short segment of optical fiber that reflects particular wavelengths of light and transmits all others. This is achieved by creating a periodic variation in the refractive index of the fiber core, which generates a wavelength-specific dielectric mirror. Hence a fiber Bragg grating can be used as an inline optical filter to block certain wavelengths, can be use...
