

Fiber optic cable pulled on utility pole

Deploying fiber above ground on poles or towers removes the need for underground digging and is particularly useful when the ground is uneven, rocky or both. Aerial installation is generally much less ...

Fiber optic cable is strong, reliable and built for long-term performance, but it still needs to be handled correctly during installation. Most fiber damage does not come from normal operation ...

Fiber optic cable sequential numbers are required at each pole location and vault wall. Sequential numbers will identify conduit length, and slack left in vaults and at poles.

Aerial Deployment: Fiber optic cables are strung on existing utility poles alongside power lines. This is often faster and less expensive than underground deployment, especially in areas with established ...

Fiber optic cable may be installed indoors or outdoors using several different installation processes. Outdoor cable may be direct buried, pulled or blown into conduit or innerduct, or installed aerially ...

Some utility companies mark or paint their lines. If you see a marked line with an exposed cable or wire, and it doesn't say AT& T, be sure to report it directly to that company.

If a cable puller is used to 1) hand-pull the cable or 2) pull the pull/ winch-line into position for a winch-assisted installation, place the blocks individually on the strand as the puller passes.

Field Identification: Fire Department cables can be easily recognized, as it is usually two small cables that travel parallel to each other, about 4" apart, from pole to pole (Figure 3-12).

A neighbor's cable line running over your property without permission is a form of trespass, and you have legal tools to force the cable company to move it. The responsible party is almost ...

Fiber optic cables are the modern communication channels that play an important role in transmitting huge volumes of information at the speed of light. But should fiber optic cables be buried ...
