

Shop our GYTA53, GYTY53, and GYFTA53 fiber optic cables with steel tape armor. Enjoy reliable performance with up to 144 cores. Perfect for underground use. | Alibaba

About model GYFTA53, the 250um fibers are positioned in a loose tube made of high modulus plastic. The tubes are filled with a water-resistant filling compound.

Upgrade your data transmission with GYFTA53 optical cables. High strength, hydrolysis resistance, and effective waterproofing performance. Order now!

Excellent water-resistant performance with double plastic-coated aluminum tape-PE bonded inner sheath, double armored protective layers provide excellent performance of crush resistance and ...

Then the cable core is covered with a thin Polyethylene (PE) inner sheath, which is filled with jelly to protect it from water ingress. After a corrugated steel tape armor is applied the cable is completed ...

An Aluminum Polyethylene Laminate (APL) is applied around the cable core. Then the cable core is covered with a thin polyethylene (PE) inner sheath, which is filled with jelly to protect it from water ...

Then the cable core is covered with a thin Polyethylene (PE) inner sheath, which ...

These cables have been engineered for direct underground installation and are guaranteed to withstand any conditions without the need for extra conduit. These cables assure supreme mechanical ...

GYFTA53 (Loosetube stranding, Non-metal strength member, Flooding jelly compound, Aluminum-polyethylene adhesive inner sheath, Steel-polyethylene adhesive outer sheath)

The fiber cable GYFTA53 is suitable for installation in conduits or antennas in areas with high incidence of lightning or high voltage exposure. It contains single mode or multimode optical fiber with color ...

Whether it is wooden reel that pursue natural texture and environmental protection concepts, or iron reel that emphasize sturdiness and durability, we present them all to ensure the best protection of optical ...
