

How to configure multiple broadband switch aggregation

Link Aggregation is used to increase the available bandwidth between the firewall and a switch by aggregating up to four interfaces into a single aggregate link, referred to as a Link ...

This guide covers link aggregation--what it is, why you need it, how to set it up, and key troubleshooting tips.

Learn how to use Link Aggregation between UniFi switches or clients to increase bandwidth and redundancy. Everything you need to know

Port aggregation is useful for implementing load balancing and provides a redundant link backup. To allow port aggregation, the basic configuration on all the ports must be consistent. The following list ...

Configuring port aggregation on a UniFi switch is straightforward using the UniFi Network Controller (or UniFi OS Console). The process involves selecting the ports you wish to combine, ...

I'm going to set up Link Aggregation between two gigabit switches: an 8 port Linksys SRW2008; and a 16 port Netgear GS716GT, shown in Figures 1 and 2 below. We covered both switches here a while ...

To learn how to configure an MC-LAG setup, see this guide. Find help and support for Ubiquiti products, view online documentation and get the latest downloads.

In order to configure 2 or more ports (up to 8) to be a port aggregate, simply navigate to Switching & Monitor & Switch ports and select the target ports, then choose "Aggregate".

If multiple switches are used, these switches have to be stackable and properly configured. If Link Aggregation is not supported by the switch, the traffic sent by your Synology NAS can still be balanced.
