

Accurate control of the excess length of the optical fiber, stable optical cable performance. Dry-type cable core water blocking, low carbon and environmental protection.

The air-blowing micro cable and the manufacturing method have the advantages of high production efficiency and capability of effectively improving air-blowing performance.

The bid we won this time is to supply our leading product: MINI air blowing fiber optic cable which estimates to be about 10,000km. This type of optical cable is mainly used for FTTH which has the ...

Designs are always based on minimal cable and duct diameters for cost effective ...

Designs are always based on minimal cable and duct diameters for cost effective installation and materials. The cable can be used as the drop cable of distribution segments in FTTH networks and ...

You can start by sourcing finished optical cables with us, and when the time is right to build or expand your own production capacity, we are able to support you with production lines, raw materials, ...

The company has factory and management system, has>15years in fiber cables design and production experiences, can make high quality products according to customer drawing and also ...

GL FIBER focuses on optical fiber OEM production services, and is committed to providing customers with brand customization, personalized packaging design, optimal cable structure design, and the ...

MINI Air Blown Micro Cables are designed to be modular and adaptable. The air-blowing method allows for fibers to be added, replaced, or re-routed based on future needs.
