

Designed to meet the demands of today's data-intensive world, these cables are comprised of multiple optical fibers bundles in a flat ribbon format that is high density, lightweight, and durable.

A new type of hollow optical fibre promises to boost the amount of data that can be carried in each glass strand, and to do so over longer distances. This could help to make...

From EPFU to GCYFY, discover all types of air-blown micro cables for indoor, outdoor, and last-mile FTTH fiber deployments with microduct systems.

As the first to introduce the air blown fiber technology in North America, the FutureFLEX[®] solution offers competitive features and benefits to make it compatible with any network infrastructure design.

Scientists at the University of Southampton have developed a radical new hollow-core optical fiber that carries light through air instead of solid glass. The result? Data that moves faster, ...

These microcables are specifically optimized for air-blown applications. An ideal solution for congested networks, Lightera microcables are available in a range of designs to meet the needs of virtually any ...

Air Blown Fiber Optic Cables are redefining how networks are built and scaled, providing a host of compelling benefits that make them a preferred choice for forward-thinking organizations.

BLOLITE is easily installed using compressed air and fibers are easy to terminate and are compatible with all standard optical connectors. BLOLITE is extremely reliable, with a zero failure rate since the ...

While there have been many advances in recent years, blown fiber cable is not a new technology, although it is relatively new compared to conventional cabling methods that date back to Alexander ...

eABF cables are designed by AFL to offer the most rugged and reliable enterprise-based blown fiber solution in the market today. The patent pending cable design combines a light-weight, high-drag ...
