

Explore the technological advancements, innovative methodologies, and evolving industry demands that are reshaping the world of Optical Device Simulation, Plasmonic and Nanophotonic.

in use for the last 12 years for simulating modern fiber optic communication systems, publishing research papers, theses, projects and laboratory simulation experiments.

OptiSystem is an innovative, rapidly evolving, and powerful software design tool that enables users to plan, test, and simulate almost every type of optical link in the transmission layer of a broad spectrum ...

OptiSystem is an optical communication system simulation package for designing, testing, and optimizing virtually any type of optical link in the physical layer of a broad spectrum of optical ...

Optilux is an open-source collection of algorithms to design, simulate, and analyze optical communication systems at the physical layer. Optilux is implemented as a Matlab/Octave toolbox ...

Synopsys OptSim software supports the design and simulation of optical communication systems at the signal propagation level.

Photonic System Tools allows users to design and simulate current and next generation optical communication systems and photonic integrated circuits at the signal propagation level.

By providing a comprehensive platform for evaluating system performance, RSoft supports the design of high-bandwidth, long-distance fiber-optic communication systems.

OptiCommPy is freely accessible, providing researchers, students, and engineers with the option to simulate various fiber optical communication systems at the physical layer.
