

Figure 1. The three variables that will affect device production include the component, the assembly process and the adhesive. To select an appropriate adhesive, a designer should consider how the ...

CTIVE ASSEMBLY ADHESIVE Formulated for use with semiconductor, optical, fiber-optic and optoelectronic applications, Henkel's LOCTITE®; STYCAST OS 8300 provides assembly productivity ...

The specifics of any optical adhesive application must be examined, including the geometry of the parts and their dimensions. For example, in a fiber in a ferrule-type application, the ...

The information contained herein is presented as a guide to product selection. It is subject to change without notice, and should not be regarded as a representation, warranty or guarantee with regard to ...

All FOC packaging maintains a strict mix ratio of at least +/- 1% and are highest quality to ensure avoiding failures during operation and consistency throughout their shelf life. Usage tips and ...

Out of the multitude of adhesives currently available, there are five families that are most commonly used in fiber optic assembly. Each of these families offers a unique combination of performance and ...

This blog post will explore the unique demands of fiber optic bonding, outline the types of adhesives used, and demonstrate how Incure provides cutting-edge, UV-curable solutions to ...

These adhesive sections contain a general description of each adhesive, a detailed discussion of the chemical structure and cure mechanism of each adhesive, and the benefits and limitations of using ...

Dymax optical adhesives are single component, low outgassing, low shrinkage, and have gap-filling capabilities. High-performance fiber optic adhesives minimize movement of parts during cure.

Every factory-terminated connector uses the epoxy/polish method of termination. It's a matter of performance, reliability and economics. The epoxy/polish type of connector provides the lowest loss, ...
