

Telecommunications Fiber Optic Trunk Line

Our pre-assembled MPO female trunk cable tackles high-density data center network connections and combines multiple fiber optic lines into a single, easy-to-manage cable.

Fiber optic trunk cables are available pre-terminated and tested to ensure high performance and reliability. This reduces the likelihood of performance issues related to improper termination or ...

Amphenol's Trunk Cables are pre-terminated cable assemblies designed for seamless integration in backbone and horizontal cabling networks. These cables provide cost-effective scalability while ...

A trunk cable is a pre-terminated fiber or copper cable that combines multiple individual cables into a single bundled unit. It's built to carry multiple data channels between key infrastructure points.

Fiber trunks are pre-terminated cable assemblies connecting switches, servers, patch panels, and zone distribution areas in the data center, or serving as the backbone of enterprise fiber networks.

A trunk cable is a type of fiber optic cable that can carry large amounts of data at once through a telecommunications system. It acts as the "backbone" or main line of communication within ...

Hubbell fiber optic assemblies feature the latest in both performance and density innovations. FiberHubb(TM) modular trunks provide the customization and bandwidth needed for today's high ...

Our fiber optic trunk cables provide high density connections to patch panels, cassettes or cable harnesses. Order a single or multi mode cord online today!

An authoritative architectural guide to MPO trunk cables, evaluating high-density fiber counts, ultra-low loss budgets, and backbone deployment strategies for 2026.

The trunks are fully configurable and available with a variety of cable and connector configurations, perfect for data center applications where high bandwidth is required.
