

Libya 1, situated within the Sahara Desert in Africa, is a pivotal Pseudo-Invariant Calibration Site (PICS) utilized by the Earth Observation community for satellite sensor calibration and performance monitoring.

This training course explores the application of smart sensors in agriculture, covering their design, deployment, and integration into farm management systems to optimize operations and support ...

The need for real-time data analysis and insights from sensor data to improve operational efficiency, enhance decision-making processes, and optimize resource utilization is fueling the demand for ...

Satellite-based remote sensing is a branch of technology that has been around since the 1960"s. Sensors on board satellites orbiting the earth collect information from the earth"s surface. ...

In defense and civil protection, THEON Sensors signed a memorandum for technology transfer, local production, and support of night vision and thermal imaging systems, while General ...

The aim of paper which based on descriptive study and the experience of researchers as engineers in various industrial fields is to emphasize the role of the sensors in protecting the equipment and ...

In recent years, digital measurement systems have made a significant impact on the oil and gas industry. From improved safety protocols to enhanced efficiency, digital measurement ...

The site was chosen as a large-area site for medium resolution sensors, and with high-resolution sensors now common, smaller sites are being identified. This work has identified an ...

Aerial surveillance contributes directly and meaningfully to interceptions of migrants, asylum seekers, and refugees at sea.

SENSOTO - offers an extensive collection of current and historical sensor data for Libya. Whether for research, planning, industry or private projects - SENSOTO offers you easy access to valuable data ...
