

A laser diode is a small semiconductor device that emits powerful and precise light using a process known as stimulated emission. These devices are capable of producing an intense laser ray ...

While low-power laser diodes can exhibit a very high beam quality, the beam quality of high-power laser diodes is normally substantially lower. Therefore, the obtained ...

As we increase the current flow to the laser diode, the optical power of output light gradually increases up to a certain threshold. Until this point, most of the light emitted is due to ...

A laser diode is a semiconductor device that emits coherent light via stimulated emission, which is more complex and responsive than a light-emitting diode (LED).

Majority Carriers that are injected to the opposite side of the diode under forward bias become minority carriers and recombine. In a direct bandgap material, this recombination can result in the creation of ...

The working principle of a laser diode is based on stimulated emission and population inversion within a forward-biased semiconductor p-n junction. When sufficient current flows, more electrons occupy the ...

Laser diodes turn electricity into focused light using semiconductor materials. Learn how they work, why material choice affects color, and where they show up...

In laser diodes, beam divergence is specified with two values because of the presence of astigmatism (see Diodes vs. HeNe). In this case the orientation of the beam divergence needs to be specified.

An interband cascade laser (ICL) is a type of laser diode that can produce coherent radiation over a large part of the mid-infrared region of the electromagnetic spectrum.

Quantum cascade laser diode: This is a form of hetero-junction laser diode which the difference between well energy levels is used to provide the laser light generation.

By using an intrinsic region of higher refractive index as the depletion region, two major benefits are obtained: gain confinement and optical mode confinement. Both of these effects serve to greatly ...
