In this paper, a cost-effective and miniaturized instrument is proposed, which is based on a tunable modulated grating Y-branch (MG-Y) laser for rapid temperature measurement using a ...

This article presents an all-silica microwire optical sensor designed for both fast response time and high-resolution temperature detection. The sensor consists of a thin optical microwire created at the tip of ...

The FOS-Series fiber optic sensors are designed to be reliable and work for a wide range of applications. Fiber optic temperature measurement using the FOS-Series sensors provides accurate ...

It is the smallest optical sensor in the industry with a dimension of 0.120mm OD offering a fast response time of less than 10ms. With an accuracy of  $\pm 0.3^{\circ}\text{C}$  and resolution of  $0.01^{\circ}\text{C}$ , it is designed to meet ...

Abstract-- This paper presents an all-silica microwire optical sensor designed for both fast response time and high-resolution temperature detection.

This paper proposes a methodology to estimate the response time of fiber optic temperature sensors based on an analytical model of the heat transfer between the sensor and its ...

This work presents a highly responsive fiber-optic temperature sensor that leverages the unique properties of silicon to overcome these limitations. The proposed sensor has a resolution of about 5 ...

In this article, we investigate the dynamic response of a polymer-based interferometric temperature sensor, using both an experimental technique employing optical heating with a pulsed ...
