

Ultra-high-speed fiber optic sensor testing

Our method leverages the high wavelength discrimination of long, high-finesse fiber Fabry-Perot interferometers (FFPI), using two 1 m-long FFPIs, one as the sensor and the other as a ...

To simultaneously support a precious detection scale and a wide dynamic detection range instead of supporting either one of these two characteristics, a high-precision optical fiber sensor ...

Thorlabs' DXM Series Ultrafast Fiber Optic Photodetector Instruments provide high-fidelity optical detection with a clean impulse response as fast as 11 ps. They are available with single mode (Ø9 ...

Opterro's i*Sense product family includes industry's most comprehensive portfolio of Fiber Bragg Grating (FBG) interrogators for distributed sensing applications, supporting a range from a few to thousands ...

Opterro delivers turnkey fiber-optic sensing systems and AI-driven analytics for reliable monitoring, diagnostics, and control of critical equipment and infrastructure

Dual gas flow system was tested with SMF / MMF hybrid sensor using Luna Optical Backscatter Reflectometer (OBR) for distributed sensing tests. Fiber sensor utilizing sol-gel based Fe-doped ...

Utilizing sensors based on Fiber Bragg Grating (FBG) or Fabry-Perot (FP) sensors, Luna's HYPERION systems have been deployed in hundreds of challenging applications all over the world, delivering ...

This paper reviews the sensing principle, structural design, and temperature measurement performance of fiber-optic high-temperature sensors, as well as recent significant ...

The strain transfer correction model is proposed for the surface-adhesive tubular fiber sensor on Ultra-High Performance Concrete (UHPC). The adhesive layer she

High-temperature sensors are constantly facing the test of high temperature, high pressure, strong radiation, strong corrosion, and other harsh environments, so good package protection to improve ...
