2) Computer placement, try to place computers in groups and close to power and network outlets. This will facilitate the installation of the networking and fiber optic alarm cables.

Official MapQuest website, find driving directions, maps, live traffic updates and road conditions. Find nearby businesses, restaurants and hotels. Explore!

The conceptually simplest optical distribution network architecture is direct fiber: that is, each fiber leaving the central office goes to exactly one customer.

Single-mode fiber supports long-distance, high-bandwidth connections essential for backbone applications, while multimode fiber works well for shorter distances within buildings.
